

A PROJECT ON TO-DO LIST APP

DevTown||Prompt
Engineering&Generative AI

Name : K.AKHILA

Department : CSE

Institution : Mahatma Gandhi
University,Nalgonda

INTRODUCTION

- ◆ Overwhelming workload and constant distractions
- ◆ Tighter deadlines than ever
- ◆ Time is limited, but goals are not
- ◆ "You can do anything, but not everything." – David Allen

What is a To-Do List?

- ◆ A structured set of tasks to manage time, focus, and responsibilities.
- ◆ Includes:
- ◆ Tasks & Subtasks
- ◆ Deadlines
- ◆ Priorities
- ◆ Reminders

Benefits of a To-Do List

- ◆ Clears your mind and reduces anxiety
- ◆ Enhances time management
- ◆ Helps prioritize what matters
- ◆ Increases motivation and satisfaction
- ◆ Tracks progress effectively

Common Types of To-Do Lists

- ◆ Daily Tasks – Today's priorities
- ◆ Weekly Plans – Structure your week
- ◆ Project-Based – Break down large goals
- ◆ Kanban Boards – Visual task management

Essential Features of a Smart To-Do List

- ◆ Task categorization (e.g., Work, Personal)
- ◆ Priority tagging (High, Medium, Low)
- ◆ Due dates and deadlines
- ◆ Notifications & reminders
- ◆ Progress indicators

Top To-Do List Tools

- ◆ Digital Tools:
- ◆ Todoist, Microsoft To Do, Notion, Trello, Google Keep
- ◆ Physical Tools:
- ◆ Journals, Sticky Notes, Paper Planners

How to Create an Effective To-Do List

- ◆ 1. Brain dump all tasks
- ◆ 2. Categorize them
- ◆ 3. Assign priorities
- ◆ 4. Add deadlines
- ◆ 5. Review daily
- ◆ 6. Check off completed items

Sample Layout

- ◆ Task | Priority | Due Time | Status
- ◆ Study for TCSS exam | High | 4 PM | Pending
- ◆ Complete assignment | Medium | 6 PM | In Progress
- ◆ Exercise | Low | 7 PM | Done

IMPLEMENTATION

python code(part 1)

- ◆ class ToDoList:
- ◆ def __init__(self):
- ◆ self.tasks = []
- ◆ def add_task(self, task):
- ◆ self.tasks.append({"task": task, "completed": False})
- ◆ print(f"Task '{task}' added to the list.")

Python code(part 2)

- ◆ print(f"Task '{self.tasks[task_number - 1]['task']}' marked as completed.")
- ◆ else:
- ◆ print("Invalid task number.")

- ◆ def remove_task(self, task_number):
- ◆ if 0 < task_number <= len(self.tasks):
- ◆ removed_task = self.tasks.pop(task_number - 1)
- ◆ print(f"Removed: {removed_task['task']}")
- ◆ else:
- ◆ print("Invalid task number.")

Python code(part 3)

- ◆ print(f"Task '{self.tasks[task_number - 1]['task']}' marked as completed.")
- ◆ else:
- ◆ print("Invalid task number.")
- ◆ def remove_task(self, task_number):
- ◆ if 0 < task_number <= len(self.tasks):
- ◆ removed_task = self.tasks.pop(task_number - 1)
- ◆ print(f"Removed: {removed_task['task']}")
- ◆ else:
- ◆ print("Invalid task number.")

Main Function & Main

```
◆ def main():
    ◆   to_do_list = ToDoList()
    ◆   while True:
        ◆     print("1. Add Task\n2. View\n3. Complete\n4.
Remove\n5. Exit")
        ◆     choice = input("Choice: ")
        ◆     if choice == "1":
            ◆       to_do_list.add_task(input("Enter task: "))
        ◆     elif choice == "2":
            ◆       to_do_list.view_tasks()
        ◆     elif choice == "3":
            ◆       to_do_list.mark_complete(int(input("Task #: ")))
        ◆     elif choice == "4":
```

- ◆ `to_do_list.remove_task(int(input("Task #: ")))`
- ◆ `elif choice == "5":`
- ◆ `break;`

OUTPUT:

- ◆ To-Do List Options:
 1. Add Task
 2. View Tasks
 3. Mark Task as Complete
 4. Remove Task
 5. Exit

Enter task : Study python

Tips for Success

- ◆ Avoid overloading your list
- ◆ Break large tasks into smaller steps
- ◆ Be realistic with time estimates
- ◆ Review and revise regularly
- ◆ Celebrate small wins

Final Thoughts

- ◆ "Productivity is not about doing more. It's about doing what matters."
- ◆ Start your to-do list today and take control of your time and goals!
